Reactions and Syntheses: In the Organic Chemistry Laboratory By Lutz F. Tietze, Theophil Eicher, Ulf Diederichsen, Andreas Speicher, Nina Schützenmeister

The second edition of this classic text book has been completely revised, updated, and extended to include chapters on biomimetic amination reactions, Wacker oxidation, and useful domino reactions.

The first-class author team with long-standing experience in practical courses on organic chemistry covers a multitude of preparative procedures of reaction types and compound classes indispensable in modern organic synthesis. Throughout, the experiments are accompanied by the theoretical and mechanistic fundamentals, while the clearly structured sub-chapters provide concise background information, retrosynthetic analysis, information on isolation and purification, analytical data as well as current literature citations. Finally, in each case the synthesis is labeled with one of three levels of difficulty.

An indispensable manual for students and lecturers in chemistry, organic chemists, as well as lab technicians and chemists in the pharmaceutical and agrochemical industries.

Editorial Review

From the Back Cover

The second edition of this classic text book has been completely revised, updated, and extended to include chapters on biomimetic amination reactions, Wacker oxidation, and useful domino reactions.

The first-class author team with long-standing experience in practical courses on organic chemistry covers a multitude of preparative procedures of reaction types and compound classes indispensable in modern organic synthesis. Throughout, the experiments are accompanied by the theoretical and mechanistic fundamentals, while the clearly structured sub-chapters provide concise background information, retrosynthetic analysis, information on isolation and purification, analytical data as well as current literature citations. Finally, in each case the synthesis is labeled with one of three levels of difficulty.

An indispensable manual for students and lecturers in chemistry, organic chemists, as well as lab technicians and chemists in the pharmaceutical and agrochemical industries.

About the Author

Lutz F. Tietze studied chemistry at the universities of Freiburg and Kiel, Germany, and obtained his doctorate under the supervision of Prof. B. Franck in 1968 in Kiel. He then worked as a research associate with Prof. G. Büchi at MIT, Cambridge, USA, as well as with Prof. A. Battersby in Cambridge, UK. Since 1978 he has been Professor and Head of the Institute of Organic and Biomolecular Chemistry at the Georg-August-University in Göttingen, Germany. He has received many prizes, e.g. the highly prestigious Emil Fischer Medal of the German Chemical Society and has been awarded in 2012 with the position of a Distinguished Research Professor. His research focuses on the development of efficient and selective synthetic methods, combinatorial chemistry, the total synthesis of natural products and the design of new selective anticancer agents. He has over 460 papers, 34 patents and four books to his name.

Theophil Eicher studied chemistry at the University of Heidelberg, Germany, and obtained his Ph.D. under Georg Wittig in 1960. After postdoctoral work at Columbia University, New York, USA, in the laboratories of Ronald Breslow, he habilitated 1967 at the University of Würzburg, Germany, under Siegfried Hünig. In 1974 he was appointed as Associate Professor at the University of Hamburg, in 1976 as Full Professor of Organic Chemistry at the University of Dortmund, Germany. Since 1982, he worked as Full Professor at the University of the Saarland, Germany, and was retired in 2000. His research interests concerned the synthetic chemistry of cyclopropanones and triafulvenes, as well as natural product synthesis in the field of bryophyte constituents. He is co-author of several books. Jointly with L. F. Tietze, he was awarded the literature prize of the "Fonds der chemischen Industrie". He is Dr. h. c. and Prof. a. h. of the Facultad de Química of the Universidad de la Republica, Montevideo/Uruguay.

Ulf Diederichsen studied Chemistry in Freiburg, Germany, with a diploma work in organic synthesis and completed his Ph.D. in 1993 under the supervision of Albert Eschenmoser at the ETH Zürich working on homo- and glucose-DNA. Following postdoctoral work on radical chemistry at the University of Pittsburgh, USA, in the group of Dennis Curran, he gained his habilitation at the Technical University Munich, Germany, with Horst Kessler as mentor. In 1999, he was appointed professor of Organic Chemistry at the University Würzburg, Germany, until joining the Georg-August-University in Göttingen, Germany, in 2001 as full professor of Organic Chemistry. He was visiting professor at the LMU Munich and Goering Visiting Professor at the University of Wisconsin, USA. In 1999 he got the Karl Winnacker stipend and Hellmut-

Bredereck award and is an ordinary member of Göttingen Academy of Sciences and Humanities since 2012.

Andreas Speicher studied chemistry at Saarland University, Germany. He obtained his Ph.D. in 1994 under Theophil Eicher and was honoured with the Eduard-Martin-Award of his university. He started his independent scientific career and completed habilitation in 2003 (Privatdozent). He is head of a research group and university lecturer for organic chemistry at the Saarland University and was appointed extraordinary professor in 2011. He is temporary holding a guest professorship at the University of Strasbourg/France since 2006 and is co-author of several books. His research interests are directed to synthesis and characterization of chemically and biologically relevant natural products, especially to axially chiral macrocyclic compounds.

Users Review

From reader reviews:

Patricia Rodrigue:

People live in this new day time of lifestyle always try and must have the free time or they will get large amount of stress from both lifestyle and work. So, once we ask do people have extra time, we will say absolutely of course. People is human not really a robot. Then we ask again, what kind of activity have you got when the spare time coming to you actually of course your answer will certainly unlimited right. Then do you try this one, reading textbooks. It can be your alternative throughout spending your spare time, typically the book you have read is usually *Reactions and Syntheses: In the Organic Chemistry Laboratory*.

Marlys Wieland:

Reactions and Syntheses: In the Organic Chemistry Laboratory can be one of your beginner books that are good idea. All of us recommend that straight away because this guide has good vocabulary which could increase your knowledge in terminology, easy to understand, bit entertaining but delivering the information. The article author giving his/her effort to put every word into pleasure arrangement in writing *Reactions and Syntheses: In the Organic Chemistry Laboratory* although doesn't forget the main point, giving the reader the hottest and based confirm resource details that maybe you can be among it. This great information can drawn you into brand new stage of crucial considering.

Beth Call:

This *Reactions and Syntheses: In the Organic Chemistry Laboratory* is great reserve for you because the content which can be full of information for you who always deal with world and still have to make decision every minute. This particular book reveal it details accurately using great plan word or we can state no rambling sentences inside. So if you are read this hurriedly you can have whole details in it. Doesn't mean it only will give you straight forward sentences but hard core information with attractive delivering sentences. Having *Reactions and Syntheses: In the Organic Chemistry Laboratory* in your hand like obtaining the world in your arm, details in it is not ridiculous one particular. We can say that no publication that offer you world throughout ten or fifteen small right but this reserve already do that. So, this is certainly good reading book. Hey Mr. and Mrs. busy do you still doubt which?

Julio Huntsman:

A number of people said that they feel bored when they reading a e-book. They are directly felt this when they get a half elements of the book. You can choose the actual book Reactions and Syntheses: In the Organic Chemistry Laboratory to make your own personal reading is interesting. Your own personal skill of reading proficiency is developing when you including reading. Try to choose very simple book to make you enjoy to learn it and mingle the feeling about book and studying especially. It is to be very first opinion for you to like to available a book and learn it. Beside that the publication Reactions and Syntheses: In the Organic Chemistry Laboratory can to be your brand new friend when you're feel alone and confuse with the information must you're doing of these time.
