In-Vitro Fertilization By Kay Elder, Brian Dale

This fully updated new edition of a successful and popular practical guide is an indispensable account of modern in-vitro fertilization practice. Initial chapters cover theoretical aspects of gametogenesis and embryo development at the cellular and molecular level, while the latter half of the book describes the requisites for a successful IVF laboratory and the basic technologies in ART. Advanced techniques, including pre-implantation genetic diagnosis, vitrification and stem-cell technology, are comprehensively covered, providing up-to-date analyses of these groundbreaking technologies. This edition includes: • New practical techniques, including preservation of fertility for cancer patients, stem-cell biology/technology, vitrification and in-vitro maturation • A 'refresher' study review of fundamental principles of cell and molecular biology • The latest information available from animal and human research in reproductive biology Packed with a wealth of practical and scientific detail, this is a must for all IVF practitioners.

Editorial Review

Review

Review of the previous edition: '... an excellent handbook for good IVF laboratory practice right down to a description of total quality management (TQM) systems ... concise, well written and should be mandatory reading for all potential and actual embryologists, as well as for those clinicians seeking a wider understanding of the subject.' Human Fertility

Review of the previous edition: 'The authors are masters of this work. Their views are up-to-date, practical, and well documented. This work will be of greatest interest to clinical practitioners of in vitro fertilization that want a relatively short and very precise overview of laboratory methods. It is highly recommended.'
John E. Buster, Fertility and Sterility
