Foundations of Security Analysis and Design VII: FOSAD 2012 / 2013 Tutorial Lectures (Lecture Notes in Computer Science) From Springer

FOSAD has been one of the foremost educational events established with the goal of disseminating knowledge in the critical area of security in computer systems and networks. Over the years, both the summer school and the book series have represented a reference point for graduate students and young researchers from academia or industry, interested to approach the field, investigate open problems, and follow priority lines of research.

This book presents thoroughly revised versions of nine tutorial lectures given by leading researchers during three International Schools on Foundations of Security Analysis and Design, FOSAD, held in Bertinoro, Italy, in September 2012 and 2013. The topics covered in this book include model-based security, automatic verification of secure applications, information flow analysis, cryptographic voting systems, encryption in the cloud, and privacy preservation.
