**Sentiment Analysis in Social Networks** By Federico Alberto Pozzi, Elisabetta Fersini, Enza Messina, Bing Liu

The aim of Sentiment Analysis is to define automatic tools able to extract subjective information from texts in natural language, such as opinions and sentiments, in order to create structured and actionable knowledge to be used by either a decision support system or a decision maker. Sentiment analysis has gained even more value with the advent and growth of social networking.

Sentiment Analysis in Social Networks begins with an overview of the latest research trends in the field. It then discusses the sociological and psychological processes underling social network interactions. The book explores both semantic and machine learning models and methods that address context-dependent and dynamic text in online social networks, showing how social network streams pose numerous challenges due to their large-scale, short, noisy, context-dependent and dynamic nature.

Further, this volume:

- Takes an interdisciplinary approach from a number of computing domains, including natural language processing, machine learning, big data, and statistical methodologies
- Provides insights into opinion spamming, reasoning, and social network analysis
- Shows how to apply sentiment analysis tools for a particular application and domain, and how to get the best results for understanding the consequences
- Serves as a one-stop reference for the state-of-the-art in social media analytics
- Takes an interdisciplinary approach from a number of computing domains, including natural language processing, big data, and statistical methodologies
- Provides insights into opinion spamming, reasoning, and social network mining
- Shows how to apply opinion mining tools for a particular application and domain, and how to get the best results for understanding the consequences
- Serves as a one-stop reference for the state-of-the-art in social media analytics

## **Editorial Review**

### **About the Author**

Dr. Federico Alberto Pozzi received the Ph.D. in Computer Science at the University of Milano - Bicocca (Italy). His Ph.D. thesis is focused on Probabilistic Relational Models for Sentiment Analysis in Social Networks. His research interests primarily focus on Data Mining, Text Mining, Machine Learning, Natural Language Processing and Social Network Analysis, in particular applied to Sentiment Analysis and Community Discovery in Social Networks. He currently works at SAS Institute (Italy) as Senior Solutions Specialist - Integrated Marketing Management & Analytics.

Dr. Elisabetta Fersini is currently a postdoctoral research fellow at the University of Milano - Bicocca (Italy). Her research activity is mainly focused on statistical relational learning with particular interests in supervised and unsupervised classification. The research activity finds application to Web/Text mining, Sentiment Analysis, Social Network Analysis, e-Justice and Bioinformatics. She actively participated to several national and international research projects. She has been an evaluator for international research projects and member of different scientific committees. She co-founded an academic spin-off specialized in sentiment analysis and community discovery in social networks.

Prof. Enza Messina is a Professor in Operations Research at the Department of Informatics Systems and Communications, University of Milano-Bicocca, where she leads the research Laboratory MIND (Models in decision making and data analysis). She holds a Ph.D. in Computational Mathematics and Operations Research from the University of Milano. Her research activity is mainly focused on decision models under uncertainty and more recently on statistical relational models for data analysis and knowledge extraction. In particular, she developed relational classification and clustering models that finds applications in different domains such as systems biology, e-justice, text mining and social network analysis.

Prof. Bing Liu is a professor of computer science at the University of Illinois at Chicago. He received his PhD in Artificial Intelligence from the University of Edinburgh. His current research interests include sentiment analysis and opinion mining, data mining, machine learning, and natural language processing. He has published extensively in top conferences and journals, and is the author of three books: Sentiment Analysis and Opinion Mining (2012), Web Data Mining: Exploring Hyperlinks, Contents, and Usage Data (first edition, 2007; second edition, 2011), and Sentiment Analysis: Mining Opinions, Sentiments and Emotions (2015). Two of his papers received 10-year test-of-time awards from KDD, the premier conference of data mining and big data. His research has also been cited on the front page of the New York Times. He currently serves as the Chair of ACM SIGKDD, and is an Fellow of ACM, AAAI, and IEEE.

## **Users Review**

### **From reader reviews:**

#### **Samuel Stratton:**

Do you have something that suits you such as book? The book lovers usually prefer to choose book like comic, brief story and the biggest one is novel. Now, why not trying Sentiment Analysis in Social Networks that give your satisfaction preference will be satisfied through reading this book. Reading routine all over the world can be said as the method for people to know world better then how they react toward the world. It

can't be stated constantly that reading behavior only for the geeky man or woman but for all of you who wants to always be success person. So , for all you who want to start reading as your good habit, you may pick Sentiment Analysis in Social Networks become your own personal starter.

#### **Sheila Powell:**

You may get this Sentiment Analysis in Social Networks by go to the bookstore or Mall. Only viewing or reviewing it can to be your solve challenge if you get difficulties on your knowledge. Kinds of this publication are various. Not only by written or printed and also can you enjoy this book by simply e-book. In the modern era just like now, you just looking by your mobile phone and searching what their problem. Right now, choose your ways to get more information about your guide. It is most important to arrange yourself to make your knowledge are still revise. Let's try to choose correct ways for you.

#### **George Degregorio:**

As a university student exactly feel bored for you to reading. If their teacher expected them to go to the library in order to make summary for some e-book, they are complained. Just tiny students that has reading's heart and soul or real their interest. They just do what the educator want, like asked to the library. They go to at this time there but nothing reading significantly. Any students feel that studying is not important, boring along with can't see colorful photographs on there. Yeah, it is to become complicated. Book is very important in your case. As we know that on this time, many ways to get whatever we would like. Likewise word says, ways to reach Chinese's country. Therefore , this Sentiment Analysis in Social Networks can make you experience more interested to read.

#### **Charles Adams:**

Reading a book make you to get more knowledge from the jawhorse. You can take knowledge and information from your book. Book is composed or printed or descriptive from each source that filled update of news. In this modern era like currently, many ways to get information are available for anyone. From media social just like newspaper, magazines, science reserve, encyclopedia, reference book, novel and comic. You can add your understanding by that book. Are you ready to spend your spare time to spread out your book? Or just searching for the Sentiment Analysis in Social Networks when you desired it?
