## **Architecture and Patterns for IT Service Management, Resource Planning, and Governance: Making Shoes for the Cobbler's Children, Second Edition**

*By Charles T. Betz*

Information technology supports efficient operations, enterprise integration, and seamless value delivery, yet itself is too often inefficient, un-integrated, and of unclear value. This completely rewritten version of the bestselling *Architecture and Patterns for IT Service Management, Resource Planning and Governance* retains the original (and still unique) approach: apply the discipline of enterprise architecture to the business of large scale IT management itself. Author Charles Betz applies his deep practitioner experience to a critical reading of ITIL 2011, COBIT version 4, the CMMI suite, the IT portfolio management literature, and the Agile/Lean IT convergence, and derives a value stream analysis, IT semantic model, and enabling systems architecture (covering current topics such as CMDB/CMS, Service Catalog, and IT Portfolio Management). Using the concept of design patterns, the book then presents dozens of visual models documenting challenging problems in integrating IT management, showing how process, data, and IT management systems must work together to enable IT and its business partners. The edition retains the fundamental discipline of traceable process, data, and system analysis that has made the first edition a favored desk reference for IT process analysts around the world. This best seller is a must read for anyone charged with enterprise architecture, IT planning, or IT governance and management.

- Lean-oriented process analysis of IT management, carefully distinguished from an IT functional model
- Field-tested conceptual information model with definitions and usage scenarios, mapped to both the process and system architectures
- Integrated architecture for IT management systems
- Synthesizes Enterprise Architecture, IT Service Management, and IT Portfolio Management in a practical way

### **Editorial Review**

#### **Review**

"Intended for executives, planners and high level IT managers, this volume provides a comprehensive overview of the ecosystem of Information technology and explores the interconnectedness of technology and business as a system of value for IT architecture. Topics discussed include IT as an evolving system of continuous improvement, universal architectures, patterns for IT processes and IT lifecycles. The work explores overarching themes and also provides detailed organizational charts and plans demonstrating real world examples. Betz is research director for an integrated IT management at a management consulting firm."--*SciTech Book News*

#### **About the Author**

Charles Betz is the Research Director for IT Portfolio Management for Enterprise Management Associates, with extensive practitioner experience as an enterprise architect for large scale IT operations in retail and financial services.
