**Lectures on Celestial Mechanics (Classics in Mathematics)** By Carl L. Siegel, Jürgen K. Moser, C.L. Siegel, J.K. Moser

The present book represents to a large extent the translation of the German "Vorlesungen über Himmelsmechanik" by C. L. Siegel. The demand for a new edition and for an English translation gave rise to the present volume which, however, goes beyond a mere translation. To take account of recent work in this field a number of sections have been added, especially in the third chapter which deals with the stability theory. Still, it has not been attempted to give a complete presentation of the subject, and the basic organization of Siegel's original book has not been altered. The emphasis lies in the development of results and analytic methods which are based on the ideas of H. Poincare, G. D. Birkhoff, A. Liapunov and, as far as Chapter I is concerned, on the work of K. F. Sundman and C. L. Siegel. In recent years the measure-theoretical aspects of mechanics have been revitalized and have led to new results which will not be discussed here. In this connection we refer, in particular, to the interesting book by V. I. Arnold and A. Avez on "Problèmes Ergodiques de la Mécanique Classique", which stresses the interaction of ergodic theory and mechanics. We list the points in which the present book differs from the German text. In the first chapter two sections on the tripe collision in the three body problem have been added by C. L. Siegel.

Language Notes

Text: English (translation)

Original Language: German

About the Author

### **Biography of Carl Ludwig Siegel**

Carl Ludwig Siegel was born on December 31, 1896 in Berlin. He studied mathematics and astronomy in Berlin and Göttingen and held chairs at the Universities of Frankfurt and Göttingen before moving to the Institute for Advanced Study in Princeton in 1940. He returned to Göttingen in 1951 and died there in 1981.

Siegel was one of the leading mathematicians of the twentieth century, whose work, noted for its depth as well as breadth, ranged over many different fields such as number theory from the analytic, algebraic and geometrical points of view, automorphic functions of several complex variables, symplectic geometry, celestial mechanics.

### **Biography of Jürgen Moser**

Jürgen Moser was born on July 4, 1928 in Königsberg, then Germany. After the war he studied in Göttingen, where he received his doctoral degree in 1952 and subsequently was assistant to C.L. Siegel. In 1955 he emigrated to the USA. He held positions at M.I.T., Cambridge and primarily at the Courant Institute of Mathematical Sciences in New York; from 1967 to 1970 he was Director of this institute. In 1980 he moved to the ETH in Zürich where he now is Director of the mathematical Research Institute.

Moser has worked in various areas of analysis. Besides celestial mechanics and KAM theory he contributed to spectral theory, partial differential equations and complex analysis.

### **Users Review**

**From reader reviews:**

**Kimberly Franks:**

Book is to be different for every single grade. Book for children till adult are different content. We all know that that book is very important for all of us. The book Lectures on Celestial Mechanics (Classics in Mathematics) seemed to be making you to know about other understanding and of course you can take more information. It doesn't matter what advantages for you. The reserve Lectures on Celestial Mechanics (Classics in Mathematics) is not only giving you more new information but also to become your friend when you sense bored. You can spend your personal spend time to read your guide. Try to make relationship using the book Lectures on Celestial Mechanics (Classics in Mathematics). You never feel lose out for everything if you read some books.

**Judy Finley:**

The book untitled Lectures on Celestial Mechanics (Classics in Mathematics) is the book that recommended to you to read. You can see the quality of the guide content that will be shown to anyone. The language that author use to explained their way of doing something is easily to understand. The article author was did a lot of research when write the book, therefore the information that they share to your account is absolutely accurate. You also might get the e-book of Lectures on Celestial Mechanics (Classics in Mathematics) from the publisher to make you considerably more enjoy free time.

**Donna Davis:**

Lectures on Celestial Mechanics (Classics in Mathematics) can be one of your starter books that are good idea. We all recommend that straight away because this e-book has good vocabulary that will increase your knowledge in words, easy to understand, bit entertaining but delivering the information. The article writer giving his/her effort to place every word into joy arrangement in writing Lectures on Celestial Mechanics (Classics in Mathematics) nevertheless doesn't forget the main point, giving the reader the hottest in addition to based confirm resource facts that maybe you can be among it. This great information can drawn you into new stage of crucial contemplating.

**Daniel Caudle:**

This Lectures on Celestial Mechanics (Classics in Mathematics) is brand new way for you who has intense curiosity to look for some information given it relief your hunger of knowledge. Getting deeper you in it getting knowledge more you know or perhaps you who still having little digest in reading this Lectures on Celestial Mechanics (Classics in Mathematics) can be the light food for you because the information inside that book is easy to get by simply anyone. These books create itself in the form which is reachable by anyone, that's why I mean in the e-book type. People who think that in guide form make them feel tired even dizzy this reserve is the answer. So there is no in reading a e-book especially this one. You can find what you are looking for. It should be here for you actually. So , don't miss this! Just read this e-book style for your better life and also knowledge.
