Fortran 90 For Engineers By Delores M. Etter

- * Five-step problem solving process. A five-step methodology for solving problems is used throughout the text. Each step is clearly identified to help students focus on the process of breaking a problem into smaller components and then addressing the smaller components throughout the text. The five steps are:
 - * State the problem clearly.
 - * Describe the input and the output.
 - * Work the problem by hand (or with a calculator) for a specific set of data.
 - * Develop a solution that is general in nature.
 - * Test the algorithm with a variety of data sets.
- * Key Topics Covered - arithmetic computations, control structures, array processing, external procedures, and data types, and pointers.
- * Includes real-world applications throughout.
